

# Polyethylene Film (PE Film)

## PE LAMINATION FILMS

Our wide range of lamination films cater to the FMCG segments as well as other segments such as Pharma, Industrial Appliances, Ready to Eat food, etc.

These films are made on order as they are formulated & engineered to the specs pertaining to the product being packed inside as it is the inner layer of the laminate which comes in contact with the food. Lamination Films are used as sealant Layer in flexible packaging. These films are laminated with printed polyester films. It is mix of PE film, Printed PET and Aluminium PET, it helps in increase in self life, hygiene, sealing, and freshness.

The film assists in increasing shelf-life, avoiding contamination, retaining the freshness & aroma as well as enhances the branding of the product.
